Professional Summary

Computer Science senior graduating in December 2026, bridging a foundational understanding of systems architecture with hands-on expertise in cybersecurity. While my academic coursework established my knowledge of how systems are built, my focus is on how they are secured and monitored. Holding the CompTIA Security+ certification, I have developed a practical understanding of access controls, vulnerability management, and log analysis through rigorous virtual lab environments. Seeking an internship or entry-level role to apply my systems background and troubleshooting skills to a live security posture.

Technical Skills

- Security Operations: Threat Detection, Vulnerability Management, Incident Response (IR), Log Analysis.
- Networking & Systems: Windows 11 Administration, VirtualBox Lab Architecture, Access Control Models (RBAC, Least Privilege).
- Tools: Windows Event Viewer, VirtualBox, Flask, React.
- Business Continuity: Disaster Recovery Planning (RTO/RPO), Risk Registers, Compliance Fundamentals.

Certifications

- CompTIA Security+ CE – Earned January 2026

Technical Projects

Windows Security & Access Control Lab | VirtualBox

- Engineered a virtualized Windows 11 lab environment to simulate enterprise security scenarios and validate access control mechanisms.
- Configured advanced local audit policies to strictly monitor logon events and track both successful and failed authentication attempts.
- Simulated brute-force attacks against local accounts to test password complexity policies and trigger Account Lockout thresholds.
- Analyzed Windows Event Viewer logs (specifically isolating Event ID 4625) to identify anomalous authentication behavior and document potential compromises.

Secure Website Deployment & Hardening

- Built and deployed a web application using a Flask backend and React frontend, implementing Talisman for defense-in-depth security.
- Configured essential HTTP Security Headers (HSTS, Content Security Policy, X-Frame-Options) to mitigate common web vulnerabilities including XSS and Clickjacking.
- Set up automated deployment pipelines to maintain code integrity, streamline updates, and enforce consistent security configurations.

Education

Brooklyn College | Brooklyn, NY

Bachelor of Science in Computer Science | Expected Graduation: December 2026

- Relevant Coursework: Information Securities, Operating Systems, Data Structures

Kingsborough Community College | Brooklyn, NY

Associate of Science in Computer Science | Graduated: June 2023

Professional Experience

Junior's Wine and Liquor | Brooklyn, NY

Sales Associate | January 2023 - Present

- Supported regulatory compliance by ensuring strict adherence to age-verification and ID checks.
- Handled financial transactions and inventory management, maintaining accuracy in a fast-paced environment.

Brooklyn College | Brooklyn, NY

Lifeguard | January 2023 - August 2025

- Maintained a secure aquatic environment through continuous surveillance and enforcement of facility safety policies.
- Collaborated with team members on emergency preparedness drills to minimize risks and enable rapid incident response.
